## What is a Coxeter group?

A Coxeter group is a group with

- Generators: $\left\{s_{1}, s_{2}, \ldots, s_{n}\right\}$
- Relations: $s_{i}^{2}=1, \quad\left(s_{i} s_{j}\right)^{m_{i j}}=1$ where $m_{i j} \geq 2$ or $=\infty$
- $m_{i j}=2:\left(s_{i} s_{j}\right)\left(s_{i} s_{j}\right)=1 \longrightarrow s_{i} s_{j}=s_{j} s_{i}$ (they commute)
- $m_{i j}=3:\left(s_{i} s_{j}\right)\left(s_{i} s_{j}\right)\left(s_{i} s_{j}\right)=1 \rightarrow s_{i} s_{j} s_{i}=s_{j} s_{i} s_{j}$ (braid relation)
- $m_{i j}=\infty: s_{i}$ and $s_{j}$ are not related.

Why Coxeter groups?

- They're awesome.
- Discrete Geometry: Symmetries of regular polyhedra.
- Algebra: Symmetric group generalizations. (Kac-Moody, Hecke)
- Geometry: Classification of Lie groups and Lie algebras

## Examples of Coxeter groups

(Finite) $n$-Permutations $S_{n}\left(A_{n-1}\right)$
123
213

- Generators $\left\{s_{1}, s_{2}, \ldots, s_{n-1}\right\}$ are:

231
321
123
132
Adjacent transpositions: $s_{i}: i \leftrightarrow i+1$ 312
321

- Only consecutive generators don't commute: $s_{i} s_{i+1} s_{i}=s_{i+1} s_{i} s_{i+1}$
- See visually with a Coxeter graph:

Affine $n$-Permutations $\widetilde{S}_{n}\left(\widetilde{A}_{n-1}\right)$

- Generators: $\left\{\mathrm{s}_{0}, s_{1}, \ldots, s_{n-1}\right\}$
- $S_{n}$ is a parabolic subgroup of $\widetilde{S}_{n}$

## Minimal length coset representatives

For a Coxeter group $\widetilde{W}$ generated by $\left\{s_{0}, s_{1}, \ldots, s_{n}\right\}$,

- An induced subgraph of $\widetilde{W}$ 's Coxeter graph is a subgroup $W$
- Today, we will always have $W$ defined by $\widetilde{W} \backslash\left\{s_{0}\right\}$
- Every element $\widetilde{w} \in \widetilde{W}$ can be written $\widetilde{w}=w^{0} w$, where $w^{0} \in \widetilde{W} / W$ is a coset representative and $w \in W$.
Simple example: For $\widetilde{w}=s_{0} s_{1} s_{2} s_{3} s_{0} s_{1} s_{2} \in \widetilde{S}_{4}$

$$
\widetilde{w}=s_{0} s_{1} s_{2} s_{3} s_{0} s_{1} s_{2}
$$

Less simple example: $\widetilde{w}=s_{1} s_{3} s_{2} s_{3} s_{0} s_{1} \in \widetilde{S}_{4}$

$$
\begin{aligned}
& \widetilde{w}=s_{1} s_{2} s_{3} s_{2} s_{0} s_{1} \\
& \widetilde{w}=s_{1} s_{2} s_{3} s_{0} s_{2} s_{1}
\end{aligned}
$$

$\star$ Combinatorial interpretations are easier to use. $\star$

## Combinatorial interpretations of $\widetilde{S}_{n} / S_{n}$

## Window notation

Affine $n$-Permutations $\widetilde{S}_{n} \quad$ (G. Lusztig 1983, H. Eriksson, 1994) Write an element $\widetilde{w} \in \widetilde{S}_{n}$ in 1-line notation as a permutation of $\mathbb{Z}$.
Generators transpose infinitely many pairs of entries:

$$
\left.s_{i}:(\mathbf{i}) \leftrightarrow \mathbf{( i + 1}\right) \ldots(n+i) \leftrightarrow(n+i+1) \ldots(-n+i) \leftrightarrow(-n+i+1) \ldots
$$

| $\operatorname{In} \widetilde{S}_{4}$, | $\cdots w(-4)$ | $w(-3)$ | $w(-2)$ | $w(-1)$ | $w(0)$ | $w(1)$ | $w(2)$ | $w(3)$ | $w(4)$ | $w(5)$ | $w(6)$ | $w(7)$ | $w(8)$ | $w(9) \ldots$ |  |
| :---: | :--- | :--- | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $s_{1}$ | $\ldots$ | -4 | -2 | -3 | -1 | 0 | 2 | 1 | 3 | 4 | 6 | 5 | 7 | 8 | 10 |$|$

$\widetilde{w}$ is defined by the window $[\widetilde{w}(1), \widetilde{w}(2), \ldots, \widetilde{w}(n)] . \quad s_{1} s_{0}=[0,1,3,6]$
$\star$ For $\widetilde{w}=w^{0} w$, the window of $w^{0}$ is the window of $\widetilde{w}$, sorted $\nearrow$.

## An abacus model for $\widetilde{S}_{n} / S_{n}$

(James and Kerber, 1981) Given $w^{0}=\left[w_{1}, \ldots, w_{n}\right] \in \widetilde{S}_{n} / S_{n}$,

- Place integers in $n$ runners.
- Circled: beads. Empty: gaps
- Bijection: Given $w^{0}$, create an abacus where each runner has a lowest bead at $w_{i}$.

Example: $[-4,-3,7,10]$

| $\text { (-15) }-14(-13)$ |  |  |  | $(-15)-14)-12$ |  |  |  | (-15) - -13 - -12 |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 10 | (-9) |  | (-11) -10) -9 |  |  |  | (-11) - -9 - -8 |  |  |  |  |
|  | (-6) | -5 |  |  | (-6) | -5 |  |  |  |  | - | -4 |
|  | $-2$ |  | 0 |  | -2 | -1) | 0 |  |  |  | - | (0) |
|  | (2) |  | 4 | $\xrightarrow{S_{1}}$ (1) | 2 | (3) | 4 | $\xrightarrow{\mathrm{SO}_{0}}$ | 1 | 2 |  |  |
| 5 | (6) |  | 8 | (5) | 6 | (7) | 8 |  | 5 | 6 |  | - |
| 9 | (10) | 11 | 12 | (9) | 10 | 11 | 12 |  | 9 | 10 | 11 | 12 |
| 13 | 14 | 15 | 16 | 13 | 14 | 15 | 16 |  | 13 | 14 | 15 | 16 |
| 17 | 18 | 19 | 20 | 17 | 18 | 19 | 20 |  | 17 | 18 | 19 |  |

- Generators act nicely.
- $s_{i}$ interchanges runners $i \leftrightarrow i+1 .\left(s_{1}: 1 \leftrightarrow 2\right)$
- $s_{0}$ interchanges runners 1 and $n$ (with shifts) $\left(s_{0}: 1 \stackrel{\text { shift }}{\leftrightarrow} 4\right)$

## Integer partitions and $n$-core partitions

For an integer partition $\lambda=\left(\lambda_{1}, \ldots, \lambda_{k}\right)$ drawn as a Ferrers diagram,

The hook length of a box is \# boxes below and to the right.

| 10 | 9 | 6 | 5 | 2 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 7 | 6 | 3 | 2 |  |  |
| 6 | 5 | 2 | 1 |  |  |
| 3 | 2 |  |  |  |  |
| 2 | 1 |  |  |  |  |

An n-core is a partition with no boxes of hook length dividing $n$.
Example. $\lambda$ is a 4 -core, 8 -core, 11 -core, 12 -core, etc. $\lambda$ is NOT a 1-, 2-, 3-, 5-, 6-, 7-, 9-, or 10-core.

## Core partitions for $\widetilde{S}_{n} / S_{n}$

Elements of $\widetilde{S}_{n} / S_{n}$ are in bijection with $n$-cores.
Bijection: $\{$ abaci $\} \longleftrightarrow\{n$-cores $\}$
Rule: Read the boundary steps of $\lambda$ from the abacus:

- A bead $\leftrightarrow$ vertical step
- A gap $\leftrightarrow$ horizontal step

Fact: Abacus flush with $n$-runners $\leftrightarrow$ partition is $n$-core.

## Action of generators on the core partition

- Label the boxes of $\lambda$ with residues.
- $s_{i}$ acts by adding or removing boxes with residue $i$.

Example. $\lambda=(5,3,3,1,1)$

- has removable 0 boxes ( $s_{0}$ is a descent)
- has addable 1, 2, 3 boxes. ( $s_{1}, s_{2}, s_{3}$ are ascents)

Idea: Use to determine a canonical reduced expression for $w^{0}$.

- Tally residues from bottom to top,

|  | 0 1 2 3 0 1 |
| :---: | :---: |
| 3 0 | 3 017230 |
|  |  |
| $\begin{array}{ll}123 & 1\end{array}$ | $\rightarrow-1230$ |
| -0132301 | 01230 |
|  | 30123 |
| $S_{1}$ |  |
|  | 0 1 2 3 0 |
|  |  |
| [2310123 |  |
|  | 123 1 <br> 121  |
| $\begin{array}{lllllll}0 & 1 & 2 & 3 & 0 & 1\end{array}$ | 0 <br> 123 |
| 3011230 | 2 |

$s_{1} \downarrow$

| 0 | 1 | 2 | 3 | 0 | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 0 | 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 | 1 | 2 |
| 0 | 1 | 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 | 3 | 0 | | 0 | 1 | 2 | 3 | 0 | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 0 | 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 | 1 | 2 |
| 0 | 1 | 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 | 3 | 0 | from right to left.

| 0 | 1 | 2 | 3 | 0 | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 0 | 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 | 1 | 2 |
| 0 | 1 | 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 | 3 | 0 |

## Canonical reduced expression for $\widetilde{S}_{n} / S_{n}$

Example: Reduced expression corresponding to $\lambda=(6,4,4,2,2)$ :

$$
\mathcal{R}(\lambda)=s_{1} s_{0} s_{2} s_{1} s_{3} s_{2} s_{0} s_{3} s_{1} s_{0}
$$

| 0 | 1 | 2 | 3 | 0 | 1 |
| :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 0 | 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 | 1 | 2 |
| 0 | 1 | 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 | 3 | 0 |$\quad \xrightarrow{S_{1}}$| 0 | 1 | 2 | 3 | 0 | 1 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 3 | 0 | 1 | 2 | 3 | 0 |  |
| 2 | 3 | 0 | 1 | 2 | 3 |  |
| 1 | 2 | 3 | 0 | 1 | 2 |  |
| 0 | 1 | 2 | 3 | 0 | 1 |  |

| 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |  |
| 2 | 3 | 0 | 1 | 2 | 3 | $S_{2}$ | 2 | 3 | 0 | 1 | 2 | 3 | $S_{1}$ | 2 | 3 | 0 | $1$ | $2$ | $3$ | S3 | 2 | 3 | 0 | 1 | 2 | 3 | $S_{2}$ |
| 1 | 2 | 3 | 0 | 1 | 2 |  | 1 | 2 | 3 | 0 | 1 | 2 |  | 1 | 2 | 3 | 0 | 1 | 2 |  | 1 | 2 | 3 | 0 | 1 | 2 |  |
| 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |  |
| 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |  |

| 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 |  | 1 |  | 0 | 1 | 2 | 3 |  |  | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 |  | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 |  | 0 |  | 3 | 0 | 1 | 2 | 3 |  | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |
| 2 | 3 | 0 | 1 | 2 | 3 | $\xrightarrow{S_{0}}$ | 2 | 3 | 0 |  | 1 | 2 | 3 | $\xrightarrow{\mathrm{S}_{3}}$ | 2 | 3 | 0 | 1 | 2 |  | $3$ | $\xrightarrow{S_{1}}$ | 2 | 3 | 0 | 1 |  |  | $3$ | $\xrightarrow{S_{0}}$ | 2 | 3 | 0 | 1 | 2 | 3 |
| 1 | 2 | 3 | 0 | 1 | 2 |  | 1 | 2 | 3 | 0 | 0 | 1 | 2 |  | 1 | 2 | 3 | 0 | 1 |  | 2 |  | 1 | 2 | 3 | 0 |  |  | 2 |  | 1 | 2 | 3 | 0 | 1 | 2 |
| 0 | 1 | 2 | 3 | 0 | 1 |  | 0 | 1 | 2 |  | 3 | 0 | 1 |  | 0 | 1 | 2 | 3 | 0 |  | 1 |  | 0 | 1 | 2 | 3 |  |  | 1 |  | 0 | 1 | 2 | 3 | 0 | 1 |
| 3 | 0 | 1 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 2 | 3 | 0 |  | 3 | 0 | 1 | 2 | 3 |  | 0 |  | 3 | 0 | 1 | 2 |  |  | 0 |  | 3 | 0 | 1 | 2 | 3 | 0 |

## Bounded partitions for $\widetilde{S}_{n} / S_{n}$

A partition $\beta=\left(\beta_{1}, \ldots, \beta_{k}\right)$ is $b$-bounded if $\beta_{i} \leq b$ for all $i$.
Elements of $\widetilde{S}_{n} / S_{n}$ are in bijection with $(n-1)$-bounded partitions.
Bijection: (Lapointe, Morse, 2005)

$$
\{n \text {-cores } \lambda\} \leftrightarrow\{(n-1) \text {-bounded partitions } \beta\}
$$

- Remove all boxes of $\lambda$ with hook length $\geq n$
- Left-justify remaining boxes.

## Canonical reduced expression for $\widetilde{S}_{n} / S_{n}$

Given the bounded partition, read off the reduced expression:
Method: (Berg, Jones, Vazirani, 2009)

- Fill $\beta$ with residues $i$
- Tally $s_{i}$ reading right-to-left in rows from bottom-to-top

Example. $[-4,-3,7,10]=s_{1} s_{0} s_{2} s_{1} s_{3} s_{2} s_{0} s_{3} s_{1} s_{0}$.

- The Coxeter length of $w^{0}$ is the number of boxes in $\beta$.

## Summary for $\widetilde{S}_{n} / S_{n}$

- See $S_{n}$ as parabolic subgroup of $\widetilde{S}_{n}$
- Window notation
- $\widetilde{S}_{n}$ elements can be written as a permutation of $\mathbb{Z}$
- Min. len. coset rep's correspond to sorted $\mathbb{Z}$-permutations.
- Abacus models
- Define the abacus by reading the entries from a window
- Generators act nicely: They interchange runners
- Core partitions
- Define the core by reading beads and gaps
- Generators act nicely: They add and remove boxes using residues
- Bounded partitions
- Define by collapsing the core partition
- Reading the residues gives a reduced expression!

## Summary for $W / W$

- See $W$ as parabolic subgroup of $\widetilde{W}$
- Window notation
- $\widetilde{W}$ elements can be written as a permutation of $\mathbb{Z}$
- Min. len. coset rep's correspond to sorted $\mathbb{Z}$-permutations.
- Abacus models
- Define the abacus by reading the entries from a window
- Generators act nicely: They interchange runners
- Core partitions
- Define the core by reading beads and gaps
- Generators act nicely: They add and remove boxes using residues
- Bounded partitions
- Define by collapsing the core partition
- Reading the residues gives a reduced expression!

## Coxeter Graphs for Types $\widetilde{B}, \widetilde{C}, \widetilde{D}$

## Type $\widetilde{C} / C$ :

Type $\widetilde{B} / D$ :

Type $\widetilde{B} / B$ :

Type $\widetilde{D} / D$ :

## Window notation for $\widetilde{W}$

Write $\widetilde{W} \in \widetilde{W}$ as a mirrored permutation of $\mathbb{Z}$ with period $N=2 n+1$.

- Satisfies $\widetilde{w}(i+N)=\widetilde{w}(i)+N$ and $\widetilde{w}(-i)=-\widetilde{w}(i)$.
- Define action of generators on [ $\widetilde{w}(1), \widetilde{w}(2), \ldots, \widetilde{w}(n)]$; extend:
- $s_{i}$ : switch $\widetilde{w}(i) \leftrightarrow \widetilde{w}(i+1)$
- $s_{0}^{C}$ : switch $\widetilde{w}(-1) \leftrightarrow \widetilde{w}(1) \quad s_{n}^{C}$ : switch $\widetilde{w}(n) \leftrightarrow \widetilde{w}(n+1)$

| In $C_{4}$ | $w(-4) w(-3) w(-2) w(-1)$ |  |  |  | (0) | w(1) w(2) w(3) w(4) |  |  |  | $w(5) w(6) w(7) w(8)$ |  |  |  | $w(9)$ | $w(10) \ldots$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $s_{1}$ | -4 | -3 | -1 | -2 | 0 | 2 | 1 | 3 | 4 | 5 | 6 |  | 7 | 9 | 11 |  |
| ${ }^{\text {s }}$ | -4 | -3 | -2 | 1 | 0 | -1 | 2 | 3 | 4 | 5 | 6 | 7 | 10 | 9 | 8 |  |
| $s_{4}$ | -5 | -3 | -2 | -1 | 0 | 1 | 2 | 3 | 5 | 4 | 6 |  | 8 | 9 | 10 |  |
| $s_{1} s_{0}$ | -4 | -3 | -1 | 2 | 0 | -2 | 1 | 3 | 4 | 5 | 6 |  | 11 | 9 | 7 |  |

$\widetilde{w}$ is defined by the window $[\widetilde{w}(1), \widetilde{w}(2), \ldots, \widetilde{w}(n)] . s_{1} s_{0}=[-2,1,3,4]$

## Window notation for $\widetilde{W}$

In type $\widetilde{B}$ (version 1 ) and type $\widetilde{D}$, the $s_{0}$ generator is:

- $s_{0}^{D}$ : switch $\{\widetilde{w}(-2), \widetilde{w}(-1)\} \leftrightarrow\{\widetilde{w}(1), \widetilde{w}(2)\}$
- Therefore, $|\{i<0: w(i)>0\}|$ is even.

| $\ln D_{4}$ | w(-4) w(-3) w(-2) w(-1) |  |  |  |  | $w(1) w(2) w(3) w(4)$ |  |  |  | $w(5) w(6)$ |  |  | $w(8)$ | $w(9)$ | $w(10) \ldots$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $s_{0}^{D}$ | -4 | -3 | 1 | 2 | 0 | -2 | -1 | 3 | 4 | 5 | 6 | 10 | 11 | 9 | 7 |  |
| $s_{4}^{D}$ | -6 | -5 | -2 | -1 | 0 | 1 | 2 | 5 | 6 | 3 | 4 | 7 | 8 | 9 | 10 |  |

In type $\widetilde{B}$ (version 2 ) and type $\widetilde{D}$, the $s_{n}$ generator is:

- $s_{n}^{D}$ : switch $\{\widetilde{w}(n-1), \widetilde{w}(n)\} \leftrightarrow\{\widetilde{w}(n+1), \widetilde{w}(n+2)\}$
- Therefore, $|\{i \geq n+1: w(i) \leq n\}|$ is even.

## Window notation for $\widetilde{W} / W$

Theorem. Given an element $\widetilde{w} \in \widetilde{W}$ written as a mirrored permutation of $\mathbb{Z}$, we obtain its minimal length coset representative $w^{0} \in \widetilde{W} / W$ by sorting the entries in the base window:

| Type | Sorting conditions |
| :--- | :--- |
| $\widetilde{C} / C$ | $w(1)<w(2)<\cdots<w(n)<w(n+1)$ |
| $\widetilde{B} / B$ | $w(1)<w(2)<\cdots<w(n)<w(n+1)$ <br> Elements of $\widetilde{B}_{n} / B_{n}$ are elements of $\widetilde{C}_{n} / C_{n}$. |
| $\widetilde{B} / D$ | $w(1)<w(2)<\cdots<w(n)<w(n+2)$ <br> Elements of $\widetilde{B}_{n} / D_{n}$ are not necessarily elements of $\widetilde{C}_{n} / C_{n}$ <br> $\widetilde{D} / D$$w(-2)<w(1)<w(2)<\cdots<w(n)<w(n+2)$ <br> Elements of $\widetilde{D}_{n} / D_{n}$ are also elements of $\widetilde{B}_{n} / D_{n}$. |

- It makes sense to define abaci for $\widetilde{W} / W$ !

## Abacus models for $\widetilde{W} / W$

(Hanusa and Jones, 2011) Given $w^{0}=\left[w_{1}, \ldots, w_{2 n}\right] \in \widetilde{W} / W$, create an abacus with $2 n$ runners with lowest beads in positions $w_{i}$. Example: $[-9,-4,1,6,11,16] \in \widetilde{C}_{3} / C_{3}$

| (2) (28) (23) (24) (23) (2) | (22) (22) (2) (27) (23) (2) | (27) (27) (2) (-2) (23) (2) |  |
| :---: | :---: | :---: | :---: |
|  |  |  |  |
| (1) (-1) (1) - -9 -8) | (11) (1) (1) (1) -9$)^{-8}$ | (17) (1) (11) (1) -9 ( -8 | (11) (1) (1) (1) -9 |
|  | (-) (-5) (-4) (3) -2$)^{-1} \xrightarrow{s_{0}}$ | (-6) (-5) (-4) (-3) ${ }_{(-2)}^{(-1)} \xrightarrow{s_{3}}$ | (-) ${ }^{-5}$ |
| (1) (2) $3^{3}(4) 5$ (6) | (1) (2) $3^{(4)(5)}$ | 1 (2) ${ }^{3}$ (4)(5)(6) | 1 (2) (3) 4 (5) (6) |
| 8 (9) 10 (11) | (8) 910 (11) 12 | 910 (11) 12 (13) | 9 (10) 1112 (13) |
| 15 (16) 17 | (15) $16 \quad 17 \quad 18 \quad 1920$ | (1) |  |
| 23 | $23 \quad 24 \quad 25 \quad 26$ |  |  |
|  |  |  |  |

Again, generators interchange runners:

$$
\begin{aligned}
& \text { - } s_{i}:(i) \leftrightarrow(i+1) \&(2 n-i) \leftrightarrow(2 n-i+1) . \quad\left(s_{1}: 1 \leftrightarrow 2 \& 5 \leftrightarrow 6\right) \\
& -s_{0}^{C}: 1 \stackrel{\text { shift }}{\leftrightarrow} 2 n \quad\left(s_{0}: 1 \stackrel{\text { shift }}{\leftrightarrow} 6\right)>s_{0}^{D}:\{1,2\} \stackrel{\text { shift }}{\leftrightarrow}\{2 n-1,2 n\} \\
& \text { - } s_{n}^{C}: n \leftrightarrow n+1\left(s_{3}: 3 \leftrightarrow 4\right)>s_{n}^{D}:\{n-1, n\} \leftrightarrow\{n+1, n+2\}
\end{aligned}
$$

## Structure of abaci and cores in $\widetilde{W} / W$

In abaci:

- Symmetry: bead in position $i \leftrightarrow$ gap in position $2 n+1-i$.
- If $s_{0}^{D}$ : number of gaps $<2 n+1$ is even. (even abacus)

Under the bijection between abaci and core partitions,

- Symmetry: Abaci in $\widetilde{W} / W \leftrightarrow$ Self-conjugate (2n)-cores
- If $s_{0}^{D}$ : even number of boxes on the main diagonal (even core)
- Know the action of generators on cores.

## Residue Structure in $\widetilde{W} / W$

In $\widetilde{C}_{n} / C_{n}$, we have fixed residue structure.
The residues increase from 0 up to $n$ and back down to 0 :

| 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 |  | 2 |
| 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 |  |  |
| 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 |  | 0 |
| 2 | 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 |
| 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 |
| 0 | 1 | 2 | 3 | 2 | 1 |  | 1 | 2 | 3 |
| 1 | 0 |  |  | 3 | 2 |  |  |  | 2 |
| 2 |  |  |  |  | 3 |  |  |  |  |
|  | 2 | 1 |  |  |  |  |  |  |  |

- $s_{i}$ acts by adding or removing boxes with residue $i$.

Example: $[-9,-4,1,6,11,16]=s_{1} s_{0} s_{3} s_{2} s_{1} s_{0} s_{2} s_{3} s_{2} s_{1} s_{0}$.

## Residue Structure in $\widetilde{W} / W$

In other types, residues involving $\{n-1, n\}$ and $\{0,1\}$ depend on $\lambda$. In type $\widetilde{D} / D$, there are both escalators and descalators.

|  |  | 2 |  |  |  | $3{ }^{3} / 2 \mid 1$ | 10 | 0 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0 | 1 | 2 |  |  | 32 |  |  |  |  |
|  |  | 0 | 0 |  |  |  | 32 | 2 |  |  |
|  | 2 | 0 | 0 | 1 | 23 |  |  | 32 |  |  |
|  | 3 | 2 | 1 |  | 02 | 3 |  |  |  |  |
|  |  |  | 2 |  | 01 | 23 |  |  |  |  |
|  |  |  |  |  | 10 | 023 |  |  |  | 3 |
|  |  |  |  |  | 20 | 012 | 23 |  |  |  |
|  |  |  |  |  | 32 | 100 | 02 | 23 |  |  |
|  |  | 3 |  |  |  | 200 | 01 | 12 |  |  |
|  |  | 2 | 3 |  |  | 321 | 10 | 0 | 2 |  |
|  |  |  |  |  |  | 32 | 20 | 0 | 1 |  |
| 2 |  |  |  |  |  |  | 32 | 21 | 0 |  |
|  |  |  |  |  | 23 |  |  | 32 | 0 |  |

- $s_{i}$ adds or removes boxes with residue $i$ (in contiguous groups).

Example in $\widetilde{D}_{5} / D_{5}$ : $s_{1} s_{2} s_{3} s_{4} s_{5} s_{3} s_{2} s_{0}$.

## Properties of abaci and cores for $W / W$

Theorem. Minimal length coset representatives in $\widetilde{W} / W$ are in bijection with the following sets of abaci and self-conjugate partitions:

Theorem. The residues in the partitions have the following structure:

| Type | Abaci | Partitions | Residues |
| :--- | ---: | ---: | :--- |
| $\widetilde{C} / C$ | all abaci | all self-conj $(2 n)$-cores | fixed |
| $\widetilde{B} / B$ | even abaci | even self-conj $(2 n)$-cores | fixed $w /$ descalators |
| $B / D$ | all abaci | all self-conj $(2 n)$-cores | fixed $w /$ escalators |
| $\widetilde{D} / D$ | even abaci | even self-conj $(2 n)$-cores | fixed $w /$ descalators <br> and escalators |

## Canonical reduced expression for $W / W$

Peel a core to obtain a canonical reduced expression for $w^{0}$.
Remove boxes from the center and record the residues at each step.

| 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 |
| 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 |
| 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 |
| 2 | 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 |
| 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 | 3 | 2 |
| 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 | 3 |
| 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 | 2 |
|  | 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 | 1 |
|  | 2 | 1 | 0 | 1 | 2 | 3 | 2 | 1 | 0 |

$$
\mathcal{R}(\lambda)=s_{0} s_{1} s_{0} s_{3} s_{2} s_{1} s_{0} s_{2} s_{3} s_{2} s_{1} s_{0} s_{2} s_{3} s_{2} s_{1} s_{0}
$$

## Bounded partitions for $\widetilde{W} / W$

Left-justifying this upper diagram gives a bounded partition (satisfying type-dependent conditions).

| 0 | 1 | 2 | 3 | 2 |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 0 | 1 | 2 | 3 | 2 |
|  |  | 0 | 1 | 2 | 3 |
|  |  |  | 0 | 1 |  |
|  |  |  |  | 0 |  |

| 0 | 1 | 2 | 3 | 2 |
| :--- | :--- | :--- | :--- | :--- |
| 0 | 1 | 2 | 3 | 2 |
| 0 | 1 | 2 | 3 |  |
| 0 | 1 |  |  |  |
| 0 |  |  |  |  |

Bounded partitions:

- Encode a reduced expression for the element
- Have Coxeter length number of boxes
- Have appeared in crystal basis theory (as Young walls), in work of Eriksson-Eriksson, and in work of Billey-Mitchell (as affine colored partitions)

## Lapointe-Morse-like bijection for bounded partitions

- Remove all boxes of $\lambda$ with hook length $\geq 2 n$
- Reinsert the boxes on the main diagonal, remove those below.
- Left-justify remaining boxes to diagonal.
- (When not $\widetilde{C} / C$, remove boxes on main and/or $n$-th diagonal.)
- Result: Upper diagram.

$\lambda=(10,9,6,5,5,3,2,2,2,1)$

$$
\beta=(5,5,4,2,1)
$$

## Conditions on bounded partitions

Theorem. We have a bijection of $\widetilde{W} / W$ with these bounded partitions:

| Type | Bounded partition structure |
| :--- | :--- |
| $\widetilde{C} / C$ | parts $\leq 2 n$, where $1, \ldots, n$ occur at most once. |
| $\widetilde{B} / B$ | parts $\leq 2 n-1$, where $1, \ldots, n-1$ occur at most once. |
| $\widetilde{B} / D$ | parts $\leq 2 n-1$, where $1, \ldots, n-1$ occur at most once, <br> and one $n$ part may be starred. |
| $\widetilde{D} / D$ | parts $\leq 2 n-2$, where $1, \ldots, n-2$ occur at most once, <br> and one $n-1$ part may be starred. |

## Combinatorial interpretations in $\widetilde{W} / W$

## Future Work

- More combinatorial interpretations for $\widetilde{W} / W$
- Learn more about the alcove model
- What do you know?
- Fully commutative elements in types $\widetilde{B}, \widetilde{C}$, and $\widetilde{D}$
- Investigation in $\widetilde{A}$ required combinatorial interpretations
- Find a 321-avoiding characterization?
- Self-conjugate core partitions
- Related to $\widetilde{C}_{n} / C_{n}$.
- Related to the alternating group.

## Thank you!
